

NAVARRO COUNTY ROAD AND BRIDGE DEPARTMENT

NAVARRO COUNTY COURTHOUSE

300 W. 3RD AVE.

CORSICANA, TEXAS 75110

APPROVAL FORM FOR RIGHT-OF-WAY CONSTRUCTION (UTILITY)

Date:	11/03/2025
Applicant:	Mastec (on behalf of Lyte Fiber, LLC)
Address:	1287 North Post Oak Rd, Suite 150, Houston, TX 77055
Phone #:	832-919-6469
Fiber-(onstruction requested: (pipeline and product, cable and type, utility and type: Optic Cable Company: Lyte Fiber, LLC
Location of Util	ity Construction: (location map must be attached)see attached map(s)
Attach location	map or drawing, description of proposed utility line and appurtenances fully shown with
	ty lines being replaced or installed in relationship with County Roads. Show on map or
drawing the loc	ation of any road bore, length of bore and size of encasement that the utility line will be
passing through	1.
Estimated start	date of construction: November 25, 2025
Estimated com	pletion date of construction: <u>December 31, 2026</u>

County of Navarro

Specifications for placing utilities within Navarro County Right-Of-Way

- 1. In the event it becomes necessary to alter or relocate the utility for which permission is sought, due to widening or improving the county road within the existing road easement or right-of-way at the point or along the route of said utility construction, Navarro County will notify, in writing, the applicant or its successor of the county road widening and/or improvements. Within 45 days after receiving notice, the applicant or its successor will perform the alteration or relocation at its own cost and expense, and said company will save and hold harmless Navarro County from any claims, or causes of action due to any claims for damages or injuries sustained by any person or property occasioned by its operation under this permit.
- 2. All road crossings will be bored unless a variance is granted.
- 3. All road crossings will be at a minimum depth of 60" below the lowest existing grade.
- 4. All parallel utility construction will be a minimum depth of 36" below existing road grade.
- 5. All right-of-way disturbed by the utility construction will be secured daily during active construction and fully restored, within a reasonable time, to a condition that is as good or better than before construction.
- 6. In the event construction is delayed or halted by adverse weather conditions, labor stoppages or mechanical difficulties, the company will ensure that all ditches are cleaned and will drain as good or better than before construction.
- 7. The County Commissioner of said Precinct may require the applicant to file a bond for road repairs and damage repairs in the amount the Commissioner determines to cover damage costs for said job. Upon completion of construction at a road crossing or parallel construction in the Right-of-way, contractor will notify the Commissioner so an inspection can be made.
- 8. The applicant in consideration of the approval of this request by the Navarro County Commissioners Court does hereby agree, upon completion of the placement of the utilities as set forth in this request, to return the county road, its right-of-way and any improvements or additions to a condition which, in the opinion of the County Commissioner, equals or exceeds the condition in which said county road or right-of-way prior to the time construction started.
- 9. The applicant shall indemnify, defend, and hold Navarro County harmless from any obligation or claim for damages that may be alleged or any costs or expenses, including but not limited to, reasonable attorneys' fees arising from the applicant's placement of the utility in the right-of-way which Navarro County may incur, or any claims Navarro County may be legally required to pay resulting from damages caused by the applicant's installation contemplated by this agreement. In the event the applicant does not provide timely locates per Texas 811, the applicant shall indemnify, defend, and hold Navarro County harmless at any future date for accidental damages to the above ground and/or buried utilities by road working equipment such as motor graders, posthole diggers, shredders, brush cutters, drainage ditch clearing equipment, etc. In the event such damages should occur, the applicant will be notified immediately.

The undersigned agrees that he has read and will abide by all requirements set forth in this form.

SHE	FT.	C3 OF C	1	OF ANY AND ALL DAMAGES INCURRED SHALL BE	

- Contractor must obtain locates prior to disturbing the ground.

 Contractor must have a copy of the approved permit from the appropriate agency on the jobsite at all times.

 Any landscaping wilb ore paleaced to equal or better than that which existed prior to work.

- Any introducing will over replaced to edgoal of better what mak which existed prior to work. Project site will be properly secured prior to the end of each day.

 All work is to be in accordance with all authorities having jurisdiction in the work zone.

 Contractors are advised to contact Level 3 for any additional information or craftication concerning scope
- of work or the requirements necessary for project completion.

 Contractor is responsible to field welfy all dimensions, quantilities and existing conditions prior to construction. If a significant change to the running line is needed, please contact your level 3 representative before proceeding.
- Before construction begins, contractor shall take appropriate precautions to avoid any potential obstructions prior to proceeding with work.
- 9. No construction on private property will commence until approval is given by the appropriate Level 3
- Contractor shall not proceed with work until they have received a Purchase Order and have been directed to do so by an authorized Level 3 representative
- 11. Contractor shall not exceed the Purchase Order value without authorization in writing from the
- 12. As-builts will be required for each project including cable footage sequential's at every access point, slaci loop, spice location, pole and terminations point. Contractor should also provide notes of all changes in depths, running lines, MH/HH locations, and any other applicable notes to depict the work that took place. NOTE: All major changes need to be pre-approved by an authorized Level 3 employee prior to starting the

SITE CONDITIONS:
The actual location of existing conduit and cables may vary from the location shown. Repair of any damaged conduit containing cable shall be made by use of PVC split duct. The contractor shall enclose the existing

The locations of existing utilities shown in the plan are approximate, When work is to be conducted in the vicinity of known utilities, their actual location must be field verified to avoid conflicts and damage to these utilities. Variation in locations between "recorded positions" and actual positions should be anticipated.

It shall be the contractor's responsibility to verify the location of all underground utilities. Buried utilities may exist in the area in addition to those shown on the plan. The contractor shall contact property owners when working within private easements for location of underground tanks, pipelines, drain tiles, or other buried improvements. The contractor shall also notify the utility notification center prior to commencing any construction

The contractor must assume all buried utilities encountered are alive and active unless specifically instructed otherwise by the owners or operators of said utilities,

The contractor shall protect the existing traffic control loops. If existing traffic control loops are damaged during

Removal of existing asphalt pavement, concrete curbs, and concrete sidewalks will be "neat line" with saw or pavement cutter, per requirements and specifications of the agency or department responsible for each location If concrete payement is encountered while excavation conduit trenches, the concrete removal will be "next line

If concrete curb returns and/or sidewalks are replaced due to conduit or manhole installation, the contractor shall place approved handicapped sidewalk and curb access ramps in conformance with State statutes.

All materials necessary for repair of streets, curbs, sidewalks, sanitary sewers, storm sewers, and public services utilities and the installation of such materials shall be in conformance with the requirements and the agency or department responsible for the operation and maintenance of the repaired facility.

All work shall conform to the specifications of the jurisdictional permit ag-

All open trenches will be clearly marked with barricades or cones. Steel plates or other types of bridging shall be provided to cover open trenches in the travel portion of the streets. These plates or bridging shall be ac

All surface to be restored to original condition, and backfill to be compacted as specified. Trench excavation in surface which include concrete treated base shall follow local area specifications.

GENERAL NOTES

HAZARDOUS MATERIA.

The contractor shall notify the jurisdictional permit agency immediately if any materials are encountered that are considered by the PA, DEQ, or OSHA as hazardous. If potentially hazardous materials are encountered the contractor shall secure the site and prevent any occidental exposure by the public or the contractor's personal.

The contractor may excevate up to, but shall not disturb known hazardous materials such as asbestos, oils elemented of all hazardous moterials must be done by an approved or certified hazardous moterials contractor licenses by the state. avate up to, but shall not disturb known hazardous materials such as asbestos, oils, acid,

A copy of all correspondence perlinent to the removal of the hazardous materials shall be transmitted to the owner and a copy shall be available at the project office and the job site.

- L. MULES.
 Aarlol construction to be preformed to industry acceptable standards.
 All height of cable placement will be recorded at the time of construction. Document all points of attachment
 6.6M strand will be with standard 5.6% hardware.
 All activation arms will be spary arms unless otherwise noted or approved by the inspector.

- Bond strand to power MON where applicable. Anchors to be used will be $\frac{1}{4}$ sorw in type. All straps will be placed 4" before and after every supporting clamp at minimum of 21" apart. P.O.4 = Point of Altachment.

nonsembournet.310662
In areas where the conduit diignment is not clearly defined by the curb lines, tence lines, or other evidence of the right-of-way, the engineer will provide centerline stake or point marks where required to make the proposed conduit diignment evident.

Closure identified in the plans shall be located by the contractor. Deviction from plan layout shall be approved by the angineer prior to conduit and/or enclosure installation.

Manhole centers will be field staked by the engineer when requested with offset staked at right angles to the conduit alignment

If additional field staking of location of conduit, manholes, property lines, etc. becomes necessary, the contractor is to notify the inspector or the engineer two days prior to the beginning of the work.

Physical work shall not be started until the governing agency inspector and the contractor are in possession of and have carefully reviewed and fully understand all conditions and specifications set forth in the required permit,

Any conflict between work print specifications and specifications set forth under related permits, franchises, and/or easements must be cleared by proper company authority before progressing with work involved.

Any project involving work along a major arterial road and/or heavy traffic volume should be anticipated.

Uniform traffic flow shall be maintained at all times. Only equipment and materials recessary for immediately scheduled or in progress will be maintained in the work area. All other equipment and material will be "stored or stocipiled." In such a monner as to eliminate hazardous confillation for traffic or pediatrions during non-verking or reversing or

Traffic worning devices and signs shall conform to the manual on uniform traffic devices for streets and highways/US covernment Printing Office) and to the state highway division standards specifications for highway construction. High heel warning hype devices are to be used at limes and special warning devices may be stipulated by the jurisdictional permit agency or only time he use will add to the sofely and protection of truffic or potential on the construction area.

All condult BUREDing in powed areas shall be backfilled with crushed grovel or completely covered at the completion of each working day. Any backfilled BURED shall be capped with a minimum layer of asphall or concrete cold profile of such working day.

The contractor shall mark the conduit BURICD and define their construction area clearly with barricades, cones, and/or other visible methods that alert the public of the construction activity.

A traffic control pion shall be prepared by the contractor as required and submitted to each permitting age requesting such pion for review and approval or revision prior to commencing any construction activity for to project. The approved pion shall be submitted to the agency and a copy of the pion shall be kept of the construction sits and must be available for review by agency representatives.

SPECIAL UTILITY CLEARANCE
All work conducted adjacent water mains shall conform to the following conditions

- As work conducted aggreen ware mans stora contains the insularing control of 3', measured surface (cathide edge to addide edge) from partial water mains.

 1. The control of the standard of t

STRUCTURE PROTECTION

Manholes and conduit to be placed adjacent to existing structures such as bridges, bridges
footing/plans, foundations, walls, power and telephone poles, ad other utilities shall maintain
a minimum clearance as shown. The confrector shall not undermine any adjacent structure

**Transport of the property of the p

Shoring used as foundation support shall be designed specifically for both the live and dead loads off the structure or it only the dead is used for design. The contractor shall provide a detailed layout and plan of the method of establishing and maintaining the design load

Existing utilities exposed during excovotion shall be 100% supported by either BURIED bridging and suspension or by the use of longitudinol trays or platforms vertically supported by adjustable building jacks.

Existing splice cases and coble supported by suspension from a cross beam. Supports shall be placed at a maximum spacing of 4 feet and shall consist of a convas sling with mylon building or rope. All coble support shall be placed in a manner that prevents kinks or other damage to the coble sheath.

An acceptable atternative to cable slings would be the utilization of a wide flange "i" bean or channel as a "cable tray" with cables/cases banded in place.

The contractor shall provide shoring for condult BURIED excavation 60° or more in depth as measured from the high side of the BURIED and for all manhole excavation.

Manhole shoring shall be tight-sheeted.

ng shall conform to the standards and specifications of local party and the not safety health administration.

The contractor shall provide all shoring and design calculations to the permit issuing agency prior to commencing any construction activity.

Estimated cor	mpletion date of construction: December 31, 2026

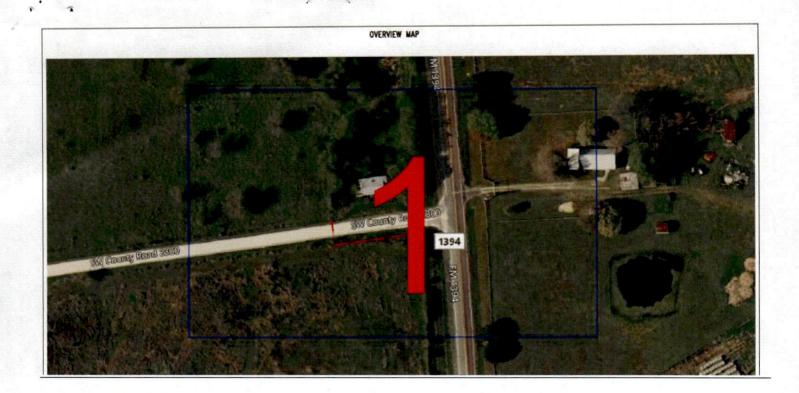

County of Navarro

Specifications for placing utilities within Navarro County Right-Of-Way

- 1. In the event it becomes necessary to alter or relocate the utility for which permission is sought, due to widening or improving the county road within the existing road easement or right-of-way at the point or along the route of said utility construction, Navarro County will notify, in writing, the applicant or its successor of the county road widening and/or improvements. Within 45 days after receiving notice, the applicant or its successor will perform the alteration or relocation at its own cost and expense, and said company will save and hold harmless Navarro County from any claims, or causes of action due to any claims for damages or injuries sustained by any person or property occasioned by its operation under this permit.
- 2. All road crossings will be bored unless a variance is granted.
- 3. All road crossings will be at a minimum depth of 60" below the lowest existing grade.
- 4. All parallel utility construction will be a minimum depth of 36" below existing road grade.
- 5. All right-of-way disturbed by the utility construction will be secured daily during active construction and fully restored, within a reasonable time, to a condition that is as good or better than before construction.
- 6. In the event construction is delayed or halted by adverse weather conditions, labor stoppages or mechanical difficulties, the company will ensure that all ditches are cleaned and will drain as good or better than before construction.
- 7. The County Commissioner of said Precinct may require the applicant to file a bond for road repairs and damage repairs in the amount the Commissioner determines to cover damage costs for said job. Upon completion of construction at a road crossing or parallel construction in the Right-of-way, contractor will notify the Commissioner so an inspection can be made.
- 8. The applicant in consideration of the approval of this request by the Navarro County Commissioners Court does hereby agree, upon completion of the placement of the utilities as set forth in this request, to return the county road, its right-of-way and any improvements or additions to a condition which, in the opinion of the County Commissioner, equals or exceeds the condition in which said county road or right-of-way prior to the time construction started.
- 9. The applicant shall indemnify, defend, and hold Navarro County harmless from any obligation or claim for damages that may be alleged or any costs or expenses, including but not limited to, reasonable attorneys' fees arising from the applicant's placement of the utility in the right-of-way which Navarro County may incur, or any claims Navarro County may be legally required to pay resulting from damages caused by the applicant's installation contemplated by this agreement. In the event the applicant does not provide timely locates per Texas 811, the applicant shall indemnify, defend, and hold Navarro County harmless at any future date for accidental damages to the above ground and/or buried utilities by road working equipment such as motor graders, posthole diggers, shredders, brush cutters, drainage ditch clearing equipment, etc. In the event such damages should occur, the applicant will be notified immediately.

The undersigned agrees that he has read and will abide by all requirements set forth in this form.

CONSTRUCTON STACES
In extres this could alignment in not clearly defined by the curb lines, ferce lines, or other evidence of the high-cl-ray, the exploses will provide centratine dicks or point matrix where required to make the proposed conduct impress evident.

Oceans identified in the plans shall be located by the contractor. Deviation from plan layout shall be approved by the engineer prior to conduit and/or enclosure installation. donhois centers will be field staked by the engineer when requested with offset staked at right angles to the cooldal algoriment

Shoring used as foundation support shall be designed specifically for both the five and dead books of the structure of it will be seed it used for design. The contractor shall provide to designal should should not plue method of establishing and maintaining the design lood consiller (As road delivers, lisbocies, etc.).

SIRECURE VISICECIENCE.
Benches and cooled to be plosed objected to entiting structures each as bridges, bridges
localing/jean, foodedistas, wells, power and telephones poles, of other utilities shall morbinal
as minimum demonstores as about 70 controllers shall not undermine any objected throther
whosel specific writine parmission from the owner/poperation of such structure.

additional field staking of location of conduit, metholes, property lines, etc. becomes necessary, the contrador is notify the inspector or the engineer two days prior to the beginning of the work.

FEBUIS-FRANCHISS_ESSENIS Physical work shall not be started until the governing agency inspector and the controtter are in passession of and how contribly reviewed and fully understand all conditions and specifications and famil in the required permit tranchises and/or examents.

Placing foreman to have a copy of the permits, easements on atte at all times.

Cataling splice cases and coble supported by suspension from a cross beam. Supports shall be be doed of a montaining spoints of 4 feel and shall consist of a convex sling with rybon being or rose. All coble support shall be placed in a monner that prevents kinks or other domoge to the coble support shall.

An acceptable attentative to cable stings would be the utilization of a wide tlange "I" bean or channel as a "cable tray" with cables/cases banded in place.

Existing utilities exposed during excerdion shall be 100% supported by alther trench bridging and suspension or by the use of longitudinal trays or platforms variably supported by adjustic building jacks.

bee utility clearance section notes for the clearance criteria to parallel or cross

by conflict between work print specifications and specifications set forth under related permits, franchises, and/or consensets must be cleared by proper company authority before progressing with work involved.

TRAFIC CONTROL.

Uniform traffic flow shall be mointained of all times. Only equipment and materials secessary for immediately standardist or in progress till be mointained in the work cross. All other applyment and material will be "stored or standardist in bush or monent as to elimitate hazardous conditions for traffic or potentians during non-revolving or stand down perfox.

relife varning devices and signs shall conform to the manual on wolform troffic devices for stream and phylogyteryclif Covernment Printing Office of the the device of the conformation to higher consolutionics. It shill need varning stype devices are to be used of lines and special varning devices may be shipplicated by the jurisdiction permit agency of any line he use will add to the safety and prohedion of traffic or the controlled area.

The contractor shall provide all shorting and design calculations to the permit issuing agency arior to commencing any construction activity.

MI shoring shall conform to the standards and specifications of local party and the occupational safety health administration.

Manhole shoring shall be fight-sheeted.

The contractor shall provide shorting for conduit trench excendition 60° or more in depth as necessared from the high side of the trench and for all manhole excendition.

All codell treathing in good oness shall be backfilled with crushed gravel or completely covered of the completion of each warking day, Any backfilled trends shall be capped with a minimum layer of asphall or concrete cold

the contractor shall mark the conduit french and define their construction area clearly with barricades, and/or other visible methods that oter! the public of the construction activity.

indific control plan shall be prepared by the controdor as required and submitted to each permitting agency equating such for review and approved or retains pilot to commercial any construction activity for this indication. The approved plan to submitted to the agency and a capy of the plan shall be kept of the contraction site and must be ordistate for review by agency representatives.
