

NAVARRO COUNTY ROAD AND BRIDGE DEPARTMENT

NAVARRO COUNTY COURTHOUSE

300 W. 3RD AVE.

CORSICANA, TEXAS 75110

APPROVAL FORM FOR RIGHT-OF-WAY CONSTRUCTION (UTILITY)

Date:	11/03/2025
Applicant:	Mastec (on behalf of Lyte Fiber, LLC)
Address:	1287 North Post Oak Rd, Suite 150, Houston, TX 77055
Phone #:	832-919-6469
	construction requested: (pipeline and product, cable and type, utility and type: -Optic Cable
Name of Utilit	y Company: Lyte Fiber, LLC
Location of Ut	ility Construction: (location map must be attached)see attached map(s)
Attach locatio	n map or drawing, description of proposed utility line and appurtenances fully shown with
distance of ut	ility lines being replaced or installed in relationship with County Roads. Show on map or
drawing the lo	ocation of any road bore, length of bore and size of encasement that the utility line will be
passing throu	gh.
Estimated star	rt date of construction: November 25, 2025
Estimated con	npletion date of construction:

County of Navarro

Specifications for placing utilities within Navarro County Right-Of-Way

- 1. In the event it becomes necessary to alter or relocate the utility for which permission is sought, due to widening or improving the county road within the existing road easement or right-of-way at the point or along the route of said utility construction, Navarro County will notify, in writing, the applicant or its successor of the county road widening and/or improvements. Within 45 days after receiving notice, the applicant or its successor will perform the alteration or relocation at its own cost and expense, and said company will save and hold harmless Navarro County from any claims, or causes of action due to any claims for damages or injuries sustained by any person or property occasioned by its operation under this permit.
- 2. All road crossings will be bored unless a variance is granted.
- 3. All road crossings will be at a minimum depth of 60" below the lowest existing grade.
- 4. All parallel utility construction will be a minimum depth of 36" below existing road grade.
- 5. All right-of-way disturbed by the utility construction will be secured daily during active construction and fully restored, within a reasonable time, to a condition that is as good or better than before construction.
- 6. In the event construction is delayed or halted by adverse weather conditions, labor stoppages or mechanical difficulties, the company will ensure that all ditches are cleaned and will drain as good or better than before construction.
- 7. The County Commissioner of said Precinct may require the applicant to file a bond for road repairs and damage repairs in the amount the Commissioner determines to cover damage costs for said job. Upon completion of construction at a road crossing or parallel construction in the Right-of-way, contractor will notify the Commissioner so an inspection can be made.
- 8. The applicant in consideration of the approval of this request by the Navarro County Commissioners Court does hereby agree, upon completion of the placement of the utilities as set forth in this request, to return the county road, its right-of-way and any improvements or additions to a condition which, in the opinion of the County Commissioner, equals or exceeds the condition in which said county road or right-of-way prior to the time construction started.
- 9. The applicant shall indemnify, defend, and hold Navarro County harmless from any obligation or claim for damages that may be alleged or any costs or expenses, including but not limited to, reasonable attorneys' fees arising from the applicant's placement of the utility in the right-of-way which Navarro County may incur, or any claims Navarro County may be legally required to pay resulting from damages caused by the applicant's installation contemplated by this agreement. In the event the applicant does not provide timely locates per Texas 811, the applicant shall indemnify, defend, and hold Navarro County harmless at any future date for accidental damages to the above ground and/or buried utilities by road working equipment such as motor graders, posthole diggers, shredders, brush cutters, drainage ditch clearing equipment, etc. In the event such damages should occur, the applicant will be notified immediately.

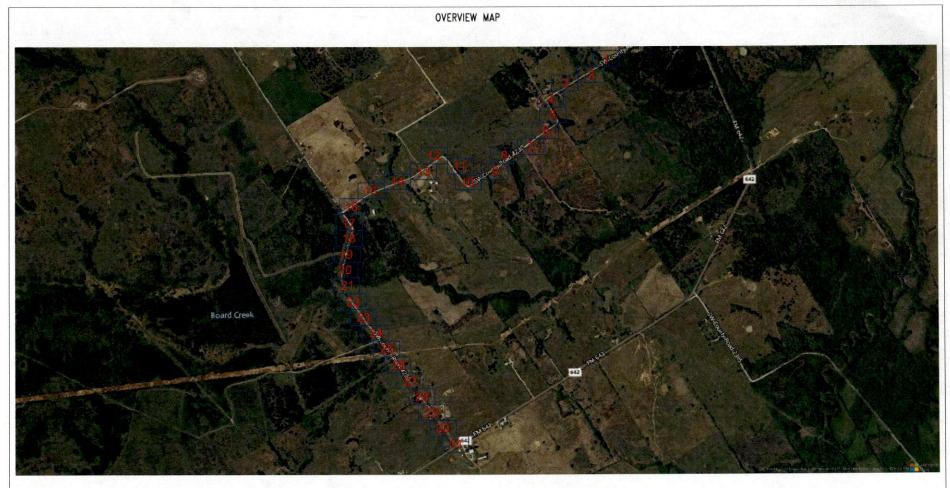

The undersigned agrees that he has read and will abide by all requirements set forth in this form.

GENERAL NOTES

GENERAL NOTES:

1. Contractor must obtain locates prior to disturbing the ground.

1. Contractor must have a copy of the approved permit from the appropriate agency on the joballe at all times.

3. Any landscaping will be replaced to equal or better than that which activate prior to work.

4. Project alls will be preparly secured prior to the end et each dry.

5. Contractors are sufficiently as the end of each dry.

6. Contractors are added to context Level 3 for any codditional information or ciartification concerning scope of work or the neglecensaria snessary for project completing conditions prior to construction. If a significant change is the renaining line is needed, please context your Level 3 representable before proceeding.

8. Before construction begins, contractor shall take appropriate precoultons to evoid any potential abstructions prior to conceading with work.

12. As-bulls will be required for each project including cable footage sequentials at every access point, stack loop, apics location, pain and terminations point. Contractor should also provide netse of all changes in depths, running lines, Mil/MH locations, and any other applicable notes to depict the work that took place. NOTE: All major changes need to be pre-approved by an authoritated Level 3 employee prior to starting the work.

SITE CONDITIONS:
The orbital location of existing conduit and cobies may vary from the location shown. Repair of any damaged conduit containing cobies and be made by use of PPC split duct. The contractor shell existing cobies in PPC.

The locations of existing utilities shown in the plan are approximate. When work is to be conducted in the vicinity of known utilities, their actual location must be field verified to avoid conflicts and damage to these utilities. Variation in location between "recorded positions" and actual positions should be anticipated.

It shall be the contractor's responsibility to verify the location of all underground utilities. Buried utilities may exist in the area in addition to those shown on the plan. The contractor shall contact property centers when working within private accessments for location of underground fearing, pipelines, dried files, or other buried improvements. The contractor shall also untility the utility untilitication content prior to commencing any construction architists.

The contractor must assume all buried utilities encountered are alive and active unless specifically instructed atherwise by the owners or operators of sold utilities.

Damage to sub-surface structures is the sole responsibility of the placing contractor.

The contractor shall protect the existing traffic control loops. If satisfing traffic control loops are damaged during construction, the entire loopwire from terminal shall be replaced in accordance with governing agency standards and

Removal of extelling asphalt povement, concrete curbs, and concrete sidewalts will be "need line" with sew or povement curfler, per requirements and specifications of the agency or department responsible for each location. If concrete povement is encountered white according conduit inschades, the concrete removal will be "need line" with a povement sew.

If concrete curb returns and/or sidewalks are replaced due to conduit or manhole installation, the contractor shall place approved handicapped sidewalk and ourb access ramps in conformance with State statutes.

All materials necessary for repair of streets, ourbs, sidevalias, sonitary severs, storm severs, and public service utilities and the landslation of such materials shall be in conformance with the requirements and specifications of the agency or department respectable for the operation and maintenance of the repaired facility.

All work shall conform to the specifications of the jurisdictional permit agency.

All open tranches will be clearly marked with bardcodes or cones. Steel plates or other types of bridging shall be provided to cover open tranches in the travel parties of the streets. These plates or bridging shall be odequate its support the normal whole loads anticipated in this care and shall be in place during all non-worlding bours.

All surface to be restored to original condition, and backfill to be compacted as specified. Trench excavation in surface which include concrete treated base shall follow local area specifications.

HAZAROUS MATERIAL.

The contractor shall notify the jurisdictional permit agency immediately if any materials are encountered that are considered by the PAP, DEQ, or OSHA as hazardous. If potentially hazardous materials are encountered the contractor shall secure the after and prevent any accidental exposure by the public or the contractor's personal.

The contractor may excevate up to, but shall not disturb known hazardous materials such as asbestes, oils, acid, etc. The removal of all hazardous materials must be done by an approved or certified hazardous materials contractor licensed by the state.

A copy of all correspondence perlinent to the removal of the hazardous materials shall be transmitted to the owner and a copy shall be available at the project office and the job site.

U. NULLS.
Aarial construction to be preformed to industry acceptable standards.
All height of coble piacement will be recorded at the time of construction. Document all points of attachment
6.5M strand will be with standard 3/5⁸ hardware.
All extension arms will be epoxy arms unless otherwise nother or approved by the inspector.

All strops will be placed 4° before and after every supporting clamp at minimum of 21° apart.

P.O.A. = Point of Attachment

normalization.3/ANAS
In areas where the conduit alignment is not clearly defined by the curb lines, fence lines, or other evidence of the right-of-eroy, the engineer will provide centerline stake or point marks where required to make the proposed conduit alignment evident.

Closure identified in the plans shall be located by the contractor. Deviation from plan layout shall be approved by the engineer prior to conduit and/or enclosure installation.

Manhole centers will be field staked by the engineer when requested with offset staked at right angles to the

If additional field staking of location of conduit, manholes, property lines, etc. becomes necessary, the contractor is to notify the inspector or the engineer two days prior to the beginning of the work.

PISMITS-TRANCHISS-TANACH STATE and The powering agency inspector and the contractor are in passession of nah have corefully reviewed and fully understand all conditions and specifications set forth in the required permit, tranchises and/or eassements.

Placing foreman to have a copy of the permits, easements on site at all times.

Any conflict between work print specifications and specifications set forth under related permits, franchises, and/or easements must be cleared by proper company authority before progressing with work involved.

IRAFFIC CONTROL

Any project involving work along a major arterial road and/or heavy traffic volume should be anticipated.

Uniform traffic flow shall be maintained at all times. Only equipment and materials necessary for immediately scheduled or in progress will be maintained in the work area. All other equipment and material will be "stored or stocipiled" in such a manner or to eliminate heardous conditions for traffic or pedestrians during non-working or

Traffic warning devices and signs shall conform to the manual on uniform traffic devices for streets and highway-IUS Covernment Printing Office) and to the state highway division standards specifications for highway construction. Figh head warning type devices are to be used of times and special warning devices may astipulated by the jurisdictional permit agency or any time he use will add to the sofety and protection of traffic or pedestrian in the construction care.

All condult trenching in paved areas shall be backfilled with crushed gravel or completely covered at the completion of such working day. Any backfilled treach shall be capped with a minimum layer of asphalt or concrete cold patch of the and of such working day.

The contractor shall mark the conduit trench and define their construction area clearly with barricades, cones, and/or other visible methods that alert the public of the construction activity.

A traffic control plan shall be prepared by the contractor as required and submitted to each permitting agency requesting such plan for review and approved or revision prior to commencing any construction activity for this project. The approved plan shall be submitted to the agency and a copy of the plan shall be kept of the construction site and must be available for review by agency representatives.

OF

C4

C4

SHEET:

SPECIAL UTILITY CLEARANCE
All work conducted adjacent water mains shall conform to the following conditions

- A. Whenever possible conduit shall maintain a horizontal separation of 3', measured surface (outside edge to outside edge) from parallel water mains.

 Whenever possible conduit shall pass under existing water mains and must maintain

- 12" vertical separation.
 C. The controlor shall be responsible for establishing and maintaining this required vertical separation by alther exposing the verter main every 100 feet in these areas where horizontal separation is less than 3 feet or by utilizing the depths of adjacent water valves. If the contractor utilizes the adjacent water line to determine water main depth, they shall contact the opency of each such location and the opency will determine the necessary depth of the top of the conduct or that point.
 On the vertical and horizontal separation shall be minimised at all times unless specifically revised by agreement between the jurisdictional permit agency and the opency. Any specific deviation in the vertical and horizontal separation from those described shall be reported to the owner by the contractor. The contractor shall be responsible for maintaining serviced and produced specific and at times and shall be.
 Clearances to storm sever and sonitiotion severs shall be exactly the same as those to water maintain.

STRUCTURE PROTECTION
Manholes and conduit to be placed adjacent to existing structures such as bridges, bridge footing/piers, foundations, walls, power and telephone poles, ad other utilities shall maintain a minimum clearance as shown. The contractor shall not undermine any adjacent structure without specific written permission form the owner/operation of such structure.

Shoring used as foundation support shall be designed specifically for both the live and dead loads off the structure or if only the dead is used for design. The contractor shall provide a detailed loyout and pion of the method of establishing and maintaining the design load condition (i.e. road detours, flebooks; etc.).

See utility clearance section notes for the clearance criteria to parallel or cross utilities.

Existing utilities exposed during excevation shall be 100% supported by either trench bridging and suspension or by the use of longitudinal trays or platforms vertically supported by adjustable building jacks.

Existing splice cases and coble supported by suspension from a cross beam. Supports shall be placed at a maximum spacing of 4 feet and shall consist of a convas sling with nyton beilting or rope. All cable support shall be placed in a manner that prevents kinks or other damage to the coble sheath.

An acceptable atternative to cable slings would be the utilization of a wide flange "1" bean or channel as a "cable tray" with cables/cases banded in place.

AT THE EXPENSE OF THE CONTRACTOR

Saturations.

The contractor shall provide shoring for condult trench excavation 60" or more in depth as measured from the high side of the trench and for all manhole excavation.

All shoring shall conform to the standards and specifications of local party and the occupational safety health administration.

The contractor shall provide all shoring and design calculations to the permit issuing agency prior to commencing any construction activity.

County of Navarro

Specifications for placing utilities within Navarro County Right-Of-Way

- 1. In the event it becomes necessary to alter or relocate the utility for which permission is sought, due to widening or improving the county road within the existing road easement or right-of-way at the point or along the route of said utility construction, Navarro County will notify, in writing, the applicant or its successor of the county road widening and/or improvements. Within 45 days after receiving notice, the applicant or its successor will perform the alteration or relocation at its own cost and expense, and said company will save and hold harmless Navarro County from any claims, or causes of action due to any claims for damages or injuries sustained by any person or property occasioned by its operation under this permit.
- 2. All road crossings will be bored unless a variance is granted.
- 3. All road crossings will be at a minimum depth of 60" below the lowest existing grade.
- 4. All parallel utility construction will be a minimum depth of 36" below existing road grade.
- 5. All right-of-way disturbed by the utility construction will be secured daily during active construction and fully restored, within a reasonable time, to a condition that is as good or better than before construction.
- 6. In the event construction is delayed or halted by adverse weather conditions, labor stoppages or mechanical difficulties, the company will ensure that all ditches are cleaned and will drain as good or better than before construction.
- 7. The County Commissioner of said Precinct may require the applicant to file a bond for road repairs and damage repairs in the amount the Commissioner determines to cover damage costs for said job. Upon completion of construction at a road crossing or parallel construction in the Right-of-way, contractor will notify the Commissioner so an inspection can be made.
- 8. The applicant in consideration of the approval of this request by the Navarro County Commissioners Court does hereby agree, upon completion of the placement of the utilities as set forth in this request, to return the county road, its right-of-way and any improvements or additions to a condition which, in the opinion of the County Commissioner, equals or exceeds the condition in which said county road or right-of-way prior to the time construction started.
- 9. The applicant shall indemnify, defend, and hold Navarro County harmless from any obligation or claim for damages that may be alleged or any costs or expenses, including but not limited to, reasonable attorneys' fees arising from the applicant's placement of the utility in the right-of-way which Navarro County may incur, or any claims Navarro County may be legally required to pay resulting from damages caused by the applicant's installation contemplated by this agreement. In the event the applicant does not provide timely locates per Texas 811, the applicant shall indemnify, defend, and hold Navarro County harmless at any future date for accidental damages to the above ground and/or buried utilities by road working equipment such as motor graders, posthole diggers, shredders, brush cutters, drainage ditch clearing equipment, etc. In the event such damages should occur, the applicant will be notified immediately.

The undersigned agrees that he has read and will abide by all requirements set forth in this form.
